

# Door & Gate Controls

## Doors & Gates

The following features available for the Doors & Gates module.

### PERMISSIONS GROUP

Allows grouping of readers for maximized efficiency.

### FLEXIBILITY

Determine the number of seconds that the door will be open and amount of time allowed before re-entry.

### KEYPAD FUNCTIONS

Enable keypad so individual access numbers can be assigned to associates, can assign generic access codes per door (up to 6).

### ACTIVITY LOGS

- Attempted use of invalid ID
- Attempted use of voided card
- Attempted card use before hire date
- Attempted use after termination date
- Use of card when associate is on LOA
- Associate's card access expired
- No permission at a location
- Card used outside of allowed times

Hospital security can mean many different things, but physical security is step one. An access control system provides a dependable, trackable method of granting the right level of access to authorized people and keeping potential trouble out.

## Seamless Integration.

The door and gate module is fully integrated within the JBDev Express system and is designed to allow authorized associates access to secure areas. The manager module is intuitive to provide fast, efficient management of specific physical areas. The application simplifies the process of adding or removing cardholder privileges, thereby streamlining training and minimizing the learning curve. JB Developers offers a fully-integrated network compatible reader with keypad for quick and easy associate identification.

## Feature Rich.

Individual doors and gates can be grouped into single permission groups for quick assignment to associates. Day and time schedules can be assigned to groups for the associate, using preset templates, to save time and provide consistent set-up. An expiration date can be set for all permissions. The system supports keypad access utilizing a universal number or an associate's unique number. In an emergency, lock-out of all associates is provided by individual reader or groups of readers.

## Audit Trail and Reporting Capabilities

JBDev Express door and gate application provides complete audit trail and reporting capabilities. All access permissions and removals are logged to the database with time, and date stamp providing the identity of the person who completed the transaction. Standard reporting options include pinpoint activity by reader, associate, or groups. You can also create custom reports with any ODBC compliant report writer such as 'Crystal Reports'.

# DOOR AND GATE CONTROLS

## Features

## Description

### ■ PERMISSION GROUPS

Allows grouping of readers to create maximized efficiency. Individual doors and gates can be grouped into single permission groups for quick assignment to associates.

### ■ FLEXIBILITY

Designed for flexibility, this module allows the client to determine the number of seconds that the door will be open and amount of time allowed before re-entry.

### ■ KEYPAD FUNCTIONS

Enable keypad so individual access numbers can be assigned to associates, can assign generic access codes per door (up to 6).

### ■ ACTIVITY LOGS

An activity log is a highly effective way to find out about any misuses by an associate.

Such as:

- Attempted use of invalid ID
- Attempted use of voided card
- Attempted card use before hire date
- Attempted use after termination date
- Use of card when associate is on LOA
- Associate's card access expired
- No permission at a location

“JBDev is far above and beyond that of other vendors...”

In the 20-plus years that we've done business with JBDev, we have not had one problem that was not solved immediately; not one request that was not fulfilled; not one enhancement that was declined.”
