

# Information Terminal

## Information Terminal

The following are system features for the information terminal.

### CLEAR DESIGN

Clear, intuitive design ensures that all employee functions are efficiently performed.

### USER-FRIENDLY

Exceptional user interface design makes Express efficient to learn, natural to use and simple to control.

### TOUCH-SCREEN TECHNOLOGY

Color-screen "activate and touch" technology that is easy-to-read.

### REAL-TIME DATA

Instant, real-time data facilitates timely decisions and adjustments.

### FEATURE-RICH SYSTEM

Express offers customizable help menus, flexible standardized charts and reports, time card records, time off requests, accrued benefits, schedules, payroll deductions, and much more easily accessible at the terminal.

## Simultaneous simplicity and power.

The Express solution delivers an intuitive, user-friendly interface of simultaneous simplicity and power. Its centerpiece is the touch screen terminal, a networked kiosk proven to make the problems inherent in paper systems disappear—right along with the paper. With color-screen "activate and touch" technology this unique system ensures all employee functions are efficiently performed. Computer-accurate time card data appears on screen in real time for easy employee review and correction. Obviously, it takes a whole lot of sophisticated technology to make a product this simple and intuitive. But just a swipe of a card and a few finger touches are all it takes to unleash its full power.

## The precision solution.

The JBDev TM620W Terminal implements Intel's latest technology into one state-of-the-art touchscreen system. With a minimum speed of 1GHS, the JBDev Terminal is the perfect fit for your performance needs and budget. With ever-changing application requirements and advances in development tools, you need a timekeeping solution encompassing simplify, versatility and power. *JBDev Express* is your precision solution.
