

# Open Database Connectivity

*ODBC is a part of Express, integrated software created to streamline work and connect the people responsible for managing the labor budget.*

## Product Features

### **MULTITASKING ENVIRONMENTS**

Designed for 32-bit multitasking operating environments of multiple versions of Microsoft Windows, including Microsoft 98, MT, ME, 2000, and XP.

### **SMOOTH DATA TRANSFERS**

Smoothly transfers data between JBDev Express timecard, associate, deduction or access control modules and other popular software programs, such as Microsoft Excel, Microsoft Word, Microsoft Access, and Crystal Reports.

## Expand database flexibility.

Optimize your reporting and analysis capabilities. With Open Database Connectivity, you're able to expand your flexibility to include applications beyond JBDev Express.

With ODBC software, you can easily move data back and forth between JBDev Express and other popular software, like Microsoft Excel, Word, Access and Crystal Reports. In short, ODBC helps you streamline work activities and increase analysis and reporting capabilities.

## Optimize your applications.

Using ODBC, mail merge a Word document with Express associate information to mail letters about upcoming license expirations. Or transfer overtime data to Excel to graphically show how your overtime breaks out by department or job code.

ODBC also gives you the tools to keep the JBDev Express data you use in other software up to date and ready to use. So you can be confident in the accuracy of the work you deliver.
